

Fab Academy - Final project proposal

# The Mobile Doorman

by Sæþor Vido - Fab Lab Vestmannaeyjar, Iceland

Outside Front door

Inside Front door

When in "Home" mode it works as a normal doorbell. But when in "Away" mode it dials a videocall to a phonenumber wich has been preset with the numpad. With video and audio back and forth. So you can answer your door while not at home.

Other possible functions:

- that you could "buzz" someone in via your mobile.
- doubles as a front door surveillance system..
- a text message when you receive post through your mail slot.
